

## Ducted Three Phase Packaged Air Conditioners

### Technical Data OPA 210 – 410

**Staging Systems Included**

**Extra Long Life  
Epoxy Coated Outdoor Coil**

**Nominal Cooling Capacity  
21 kW – 41 kW**

# OPA 210 - 410 – DUCTED PACKAGED ROOF TOP AIR CONDITIONERS

## GENERAL

- OPA** - A general designation
- OPA \*C** - Cooling only version
- OPA \*R** - Reverse cycle version
- OPA \*CA** - Cooling only version with tandem compressor system
- OPA \*RA** - Reverse cycle version with tandem compressor system

This OPA Series is a range of three phase packaged roof top air conditioners designed and developed to comply with and exceed AS/NZS 3823 specified conditions (i.e. guaranteed cooling cycle performance at 43°C outdoor temperature).

## APPLICATIONS

These units have been specifically developed for air conditioning of commercial premises, e.g. banks, supermarkets, shopping malls, food outlets, auditoriums and restaurants.

The OPA 260 A, 290 A and 410 A have tandem compressor (single circuit) systems, providing the facility for capacity control (staging) or staggered starting. The second compressor starts only when required to meet the current load conditions, thereby lowering operating costs.

In tropical (high humidity) locations care must be taken to select an airflow which gives a suitable coil face air velocity that prevents water carry-over. Applications using full or high proportions of fresh air should be referred to your nearest **temperzone** sales office for the most suitable selection of units.

## FEATURES

**Economy.** An economiser option is available to lower operating costs during the cooling cycle.

OPA 260 A, 290 A and 410 A models provide the additional economy of two stage operation, i.e. utilising one or two compressors as conditions vary, plus the advantage of staggered starting.

**Efficient.** Heat exchange coils incorporate inner grooved (rifled) tube for better heat transfer. Thermostatic expansion valves are used to ensure the system remains efficient over a wide range of operating conditions.

**Performance.** An adjustable pulley on the indoor air fan motor enables fine tuning to match the supply air requirements. Each system includes a temperature sensing head pressure control which enables the system to compensate for outdoor ambient temperatures below 20°C on cooling cycle, and above 15°C on heating cycle.

**Quiet.** The unit's generous insulation ensures a quiet unit.

**Insulation.** Foil faced closed cell foam insulation has been used in the indoor air section to ensure no particles are introduced into the air stream.

**Durable.** The cabinet and drain tray are constructed from high grade galvanised steel - polyester powder coated for increased durability. External fasteners are stainless steel. Heat exchange coils comprise aluminium plate fins on mechanically expanded rifled copper tube. The outdoor coil fins are epoxy coated for extra protection in corrosive environments, e.g. salt laden sea air.

**Self Diagnostics.** The OPA's Outdoor Unit Controller (OUC) has a display of LEDs to indicate faults and running conditions. A general fault indicator is included for interface to external systems. (Note: OPA \*R only).

## CONFIGURATIONS

Three versions are available for each model:

1. Horizontal supply/return air with mounting rails.
2. Downward supply air with mounting rails.
3. Downward supply air with plinth mount.

## OPTIONAL EQUIPMENT

1. HAN-L6 Controller.
2. LP switch.
3. Fault indicating auxillary relay board.
4. Filters (rated EU4).
5. Electric booster heat kit (internal)
  - 4.5 kW for OPA 210
  - 6.0 kW for OPA 250–300
  - 9.0 kW for OPA 390, 410Complete with heater safety cutout required to meet AS/NZS 3350.2.40 1997.
6. Economiser (factory fitted)
  - includes dampers, weatherhood, hot gas bypass and HP fan speed controller.
7. Adjustable fresh air damper and weatherhood.
8. Outdoor air coil protection guard.
9. Electronic control systems
  - available by special arrangement.

## SAFETY FEATURES

1. HP and loss of refrigerant protection.
2. Anti-rapid cycle timer and internal overload for compressor protection.
3. Circuit breaker control circuits.
4. Time-and-temperature controlled electronic de-ice switch prevents icing up of the outdoor coil during heating cycle (OPA \*R only).
5. Frost protection on cooling cycle.
6. Sensor fault indication.
7. Crankcase heater prevents liquid refrigerant condensing in the compressors during the 'off' cycle.
8. Compressor minimum run time to ensure oil return.
9. Phase rotation protection device.

## COMPRESSOR/S

Each high efficiency scroll type compressor is hermetically sealed, quiet running and supported on rubber mounts to minimise vibration.

## REFRIGERATION SYSTEM

The OPA units are factory charged with HCFC-22 (R22) refrigerant. Thermostatic expansion devices control the flow of refrigerant.

## WIRING

The electrical supply required (including voltage fluctuation limits) is: 3 phase 342–436 V a.c. 50 Hz with neutral and earth. The compressor crankcase heater requires a 24 hour power supply. A control panel, with 24V control circuit, is located in the outdoor unit and is fully wired ready to accept the main power supply.

## ECONOMISER OPTION

If the outdoor air heat content or temperature is below that of the return air, the fresh air damper opens and the return air damper closes to provide the first stage of cooling. The compressor(s) will then operate to provide more cooling if required.

An alternative way of removing return air may be required when operating on 100% fresh air.

The manufacturer operates a quality management system that conforms to AS/NZS ISO 9001:2000.

## PERFORMANCE DATA

### COOLING CAPACITY (kW)

Total = Total Capacity (kW)

E.A.T. = Entering Air Temperature

Sens. = Sensible Capacity (kW)

( ) = Nominal Capacity (kW)

Note: Capacities are **gross** and do not include allowance for fan motor heat loss. For fan motor heat loss refer to Air Handling graphs.

Power Source *4		3 phase 342 - 436 V a.c. 50 Hz						
Indoor Fan Full Load Amps	A/ph.	2.7	3.3	3.3	3.6	3.6	4.9	4.9
Running Amps (Total System)	A/ph.	14 / 13 / 13	17 / 17 / 16	15 / 15 / 14	21 / 17 / 17	22 / 18 / 18	28 / 25 / 24	29 / 26 / 25
Recommended External Fuse	A/ph.	25	32	25	40	40	50	50
Finish		tan polyester powder coat						
Net Weight	kg	309	388	401	460	448	479	473
Shipping Weight (approx.)	kg	376	425	438	502	488	550	541

### Notes:

\*1 Nominal Cooling Capacity at AS/NZS 3823 conditions: Indoor Entering Air Temperature 27°C D.B., 19°C W.B.; Outdoor Entering Air Temperature 35°C D.B.

\*2 Nominal Heating Capacity (reverse cycle units only) at AS/NZS 3823 conditions: Indoor Entering Air Temperature 21°C D.B.; Outdoor Entering Air Temperature 7°C D.B., 6°C W.B.

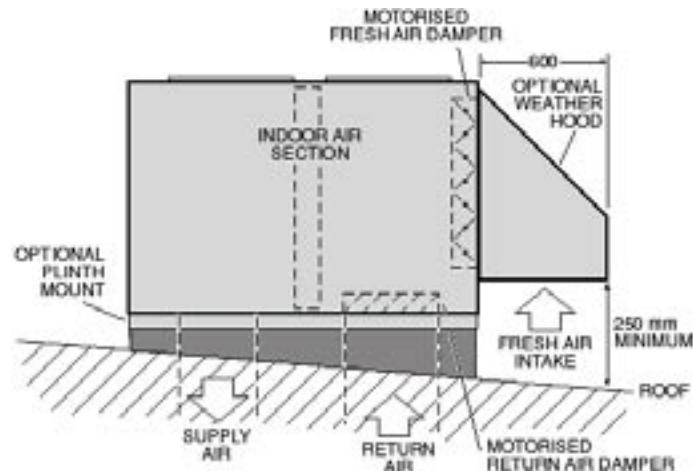

\*3 Supply air flow at Nominal Cooling Capacity conditions stated above.

\*4 Power source includes voltage limits.

\*5 Tandem compressor (single circuit) model - enables staging and low start-up current.
