Air Cooled Packaged units

OPA 465 - 705 Standard

Packaged rooftop HVAC units provide the flexibility and performance demanded in open plan commercial environments. Key benefits are noise isolation from occupied areas, ease of fresh air integration, and the reliability and durability inherent in a factory assembled packaged system. The OPA 465-705 range efficiently delivers controlled indoor environments from -15°C to +52°C ambient conditions.

Air Cooled Packaged units

OPA 465 - 705 Standard

Applications

Specifically developed for air conditioning of commercial premises i.e. supermarkets, shopping malls, auditoriums and restaurants

AIR FLOW SELECTION

If air returning to the indoor coil is regularly expected to be above 50% relative humidity then the coil face velocity should be limited to 2.5m/s or less (refer fan curves page 8).

Consideration must be given to selecting an airflow and coil face velocity that avoids water carry - over problems, i.e. in high humidity (tropical/subtropical) conditions or when heavily moisture laden fresh air is introduced.

Applications using complete or high proportion of fresh air should be discussed with a Temperzone sales engineer to establish the correct selection of unit.

FEATURES

General

These Standard units have a conventional PSC motor/belt drive fan and staged fixed speed compressors (refer p.16 for models).

An **ECO version** with EC plug fan and variable speed compressor technology (digital) is also available - refer to Temperzone.

Refrigerant R410A

R410A used which has zero ozone depletion potential.

Economy

The units have 2 independent refrigeration circuits to provide the flexibility & economy of 2 stage operation i.e. utilizing 1 or 2 circuits as conditions vary, plus staggered starting.

An economiser option is available to comply with the National Construction Code (Aust.).

Efficiency

Heat exchange coils incorporate inner grooved (rifled) tube for superior heat transfer.

The indoor coil is interlaced for efficient part load performance.

Performance

An adjustable pulley is fitted on the belt drive indoor fan motor to allow for adjusting of the airflow during air balancing and commissioning.

Head pressure control technology ensures appropriate condenser pressures are maintained, through the control of airflow.

Quiet

Extensive use of insulation ensures a quiet unit.

Insulation

Closed cell foam insulation is used in indoor air section to ensure no particles in the air stream. The insulation is foil faced & meets fire test standards AS1530.3 (1999) & BS 476 parts 6 & 7.

Air Cooled Packaged units

OPA 465 - 705 Standard

Durable

The cabinet and drain tray are constructed from high grade galvanized steel-polyester powdered coated (Grey) for all weather protection. External fasteners are marine grade steel.

Heat exchange coils comprise aluminium plate fins on mechanically expanded rifled copper tube. Outdoor and indoor coil fins are epoxy coated for extra protection in corrosive environments i.e. salt laden sea air. Coil protection guards protect against hail, accidental damage or vandalism.

Fan motor bearings are sealed for life so as not to incur regular maintenance.

Easy Access

These packaged outdoor units are typically installed on a rooftop, where maintenance access is relatively easy during operating hours.

Self Diagnosis

Each unit controller (UC8) has a display of LEDS to indicate faults & running conditions. A common fault indicator is included for interface to external systems.

Control Options

The systems' UC8 controller is BMS compatible with multi-unit control possible – either via digital and analogue signals or via Modbus/485. A BACnet/IP option is available.

OPTIONAL EQUIPMENT

1. TZT-100 thermostat.
2. Filters rated to AS1324.1.2001 - disposable or washable.
3. Factory fitted Economiser - includes dampers, fresh air cowl (not available in Australia).
4. Electronic control systems (available by arrangement) for temperature and economy cycle.
5. Factory fitted adjustable fresh air damper and cowl (NZ only).
6. High static condenser fans for situations where there is external resistance from ducting the outside air, eg plant rooms.
7. Interface to BACnet/IP networks.
8. Opposite hand supply and return air configuration.

SAFETY FEATURES

1. HP & loss of refrigerant protection
2. Anti rapid cycle timer internal overload for compressor protection
3. Circuit breaker control circuits
4. Time & temperature controlled electronic de-ice switch prevents icing up of the outdoor coil during heating cycle
5. Frost protection on cooling cycle
6. Sensor fault indication
7. Crankcase heater prevents liquid refrigerant condensing in the compressors during the "off" cycle
8. Compressor minimum run time to ensure oil return
9. 24V control circuit
10. Phase rotation protection device

COMPRESSORS

Each high efficiency scroll type compressor is hermetically sealed quiet running and supported on rubber mounts to minimize vibration

WIRING

The electrical supply required is 3 phase 400V ac 50Hz.

The units control panel is fully wired ready to accept the main power supply.

ECONOMISER OPTION

The factory fitted Economizer Damper Option is supplied with Drive Open / Drive Closed damper motors. Temperzone can supply and fit controls to manage the operation of the Economy Cycle, using either temperature or enthalpy to control the operation of the dampers. For the best result, discuss with your Temperzone Sales Engineer.

Air Cooled Packaged units

Performance Data

COOLING CAPACITY (kW)

Total = Total Capacity (kW).

Sens. = Sensible Capacity (kW).

E.A.T. = Entering Air Temperature.

= Nominal Capacity (kW).

Note: Capacities are **gross** and do not include allowance for fan motor heat loss.

Air Cooled Packaged units

Performance Data

AIR HANDLING

Note: Airflows are for a dry coil. Reduce airflow by 10% for wet coil conditions. In a free blow or low resistance application, beware of exceeding indoor fan motor's full load amp limit (refer to page 12). As filters are optional, the fan air flows given are for units installed without filters.
