## Modular Chiller Solutions

---

Giving you complete control

## Screw Chillers

### Hitachi and Temperzone:

Combining to offer Australia and New Zealand the most comprehensive range of air conditioning technology.

## The benefits of our unique modular design

Projects change and develop over time. In order to keep up you must be able to rely on your selected products.

Hitachi with its modular design is an ideal solution for quick compact and space adaptable installations whilst not limiting your ambitions for high efficiency. And with up to 116 possible module combinations for both Air and Water Cooled units, matching your project development couldn't be easier.

### Intelligent controls

You require control. With Hitachi's Modular units you can be confident of optimising the control of the chiller, saving energy and efficiently interfacing with Building Management Systems. Current Limiter settings, second Water Outlet Temperature setting (4 for Heat Pump), Night Shift mode along Modbus and BACNet Gateways will provide your site customisation. Whilst dynamic sequencing of modules for priority, operation time, backup, maintenance or module failure automatically provides continuity.

### Price, performance and space flexibility

What drives your project, High efficiency? Reduced initial costs? Or is space flexibility the determining factor? With Hitachi's Samurai Modular Chiller range you can specify your exact project requirements by configuring a chiller with 1 or up to 8 modules. Two operating modes selectable at commissioning allow the installation's performance to focus on either high efficiency or high accuracy outlet water temperature. Alternatively, spread the cost of investment and add modules to match your project phases.

### Continuous operational safety

Safety first. Each module has its own compressor, regulators and refrigerant circuit. Should a module fail, the remaining modules maintain operational continuity, whilst Hitachi's unique Dynamic Back-up Control automatically starts any standby modules. Smart defrost, automatic restart after power failure, anti-freeze pump function, automatic fan on/off cycling for snow protection, remote alarms all enhance the security of supply.

# Modular Chiller Features

## Screw Chillers

### Control

- LCD Touch Panel
- BACnet Gateway
- ModBus Gateway

Optional Coil Guard Shown

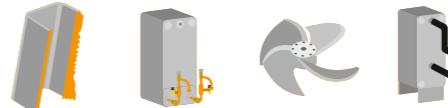

### Versatility

- Modular Design
- Modules joined on site

### Efficiency

- U-Shaped Heat Exchanger
- Continuous Capacity Control
- DC Motor and Fan
- Electronic Expansion Valves
- Plate Heat Exchanger

### Installation

- Twin Screw Compressor
- Increased Corrosion Protection
- Low noise option

## Screw Chillers

### Engineered for tomorrow

Modular design combined with world-renowned reliability. Samurai chillers are highly effective, even at partial load.

## New components

### Twin screw compressor

Latest development of Hitachi's world renowned screw compressor technology. Optimised for R134a refrigerant, featuring continuous capacity control and a unique cyclonic oil chamber.

A new rotor, a lighter casing and easy access to the E-Box enhance efficiency and handling. Whilst a new bearing system allows the overhaul period to be increased to 40,000 hours.

### Plate heat exchangers

The new AH series units are equipped with true Dual-type brazed plate exchangers, manufactured from stainless steel AISI316. These plate heat exchangers have two refrigerant inlets in order to improve the distribution of gas-liquid mixtures in the interior of the evaporator. The higher efficiency and compact nature of the refrigeration system allows for accurate control of the evaporation temperature.

Moreover, the pressure loss on the water inlet side has been significantly reduced, less than 24 kPa at nominal conditions, facilitating lower input power of the circulating pumps.

### Continuous capacity control

Hitachi's Continuous Capacity Control system uses advanced electronic controls to position the infinitely variable slide valve within each compressor. Capacity control per module is performed from 100% to 25% load linearly.

Due to the modular ability of the AH series the final Chiller turndown is 100% to 3% (dependent on quantity of modules.)

Modulation allows exact load control and accurate chilled water temperature without the need for expensive inverters offering significant saving compared with step control systems.

## Screw Chillers

### DC motor and fan

Each module is equipped with 4 DC inverter-controlled fan motors.

This ensures low power consumption especially in partial load. The use of DC fan motors significantly improves the efficiency compared to conventional AC motors. The continuous speed control of all motors ensures precise regulation of airflow.

The new 4-bladed fan (710 mm) is optimized for use in the new AH Series chillers:

- Low sound emissions
- Increased air throughput
- Reduced energy consumption

### U-shaped heat exchanger

The AH series takes advantage of the latest technology that has proven itself in the VRF Series. The "U" shaped style provides a 20% increase in surface area compared with the previous series. 7 mm piping ensure a high heat transfer ratio, whilst an additional sub-cooling circuit increases the seasonal efficiency even at low load conditions.

### Electronic expansion valve

To provide greater efficiency and accuracy, all units are equipped as standard with two electronic expansion valves to ensure equal refrigerant distribution to both inlets of the plate heat exchangers. New model with higher torque and increased pulses range (656 to 5960) for improved endurance and precision.

### LCD touch panel

Each Hitachi Model RC-1 AH series is equipped with its own user-friendly touch screen panel, which shows the data of the device and settings of various parameters to optimize the performance of the device allows.

- 3.5 "TFT display
- 320 × 240 pixels (QVGA)
- 65,536 colours
- Available in multiple languages
- Status indicator of the unit: pump kit option, fan, alarm, error messages
- Operating parameters: temperature, pressure, etc.
- Display of the last 10 alarms. The software saves detailed operating parameters of the last 3 alarms (at the moment the alarm /10 seconds before the alarm /20 seconds before the alarm)

## Screw Chillers

### Always well connected

We've taken care of everything. A range of optional accessories can be added to ensure Samurai meets all your requirements.

## Options

### ModBus Gateway

- Compatible with R134a modules
- Ports: RS485 & TCP (Ethernet)
- New parameters: High pressure, low pressure, operating time
- Easy configuration
- Din rail mounting

One Gateway per chiller (max. eight modules)

### BACnet Gateway

- Compatible with R134a modules
- BACnet IP
- Easy configuration
- Din rail mounting (one Gateway per chiller (max.eight modules))

### Low noise - optional

Compressor enclosure manufactured from specially designed acoustic panels. Module noise levels are reduced -3dB(A) or -5dB(A) against the standard module, without any reduction in performance, efficiency or footprint.

## Screw Chillers

### Engineering excellence

Hitachi's vision is to deliver innovative solutions that answer society's challenges. But we never lose sight of the most important factor; our customers.

## Machine protection

### DX Coil Protection – optional

Optional additional protection applied on top of the standard acrylic coat to each of the 3 Rows per "U" coil section. The heat exchangers are protected to 3,500h in the "salty spray test" according to DIN50021-SS. (Standard protection is 480h)

Affords additional protection for installations in areas such as; Industrial areas with high humidity and aggressive atmospheres, Coastal environments with high salinity.

### Increased chiller protection – optional

Optional additional protection for the chiller components and structure. Protected to 1,440h in the "salty spray test" according to DIN50021-SS. (Standard protection is 480h)

#### Modifications are:

- dx coil heat exchanger protection
- Additional coating to the units inner and outer plates, electrical panel, base, fan and heat exchanger guards.
- Stainless Steel Water Piping
- Painted low noise compressor enclosure

Protection is suitable for installations such as, industrial areas with high humidity and aggressive atmosphere and coastal and offshore environments with high salinity.

# RCME AH1

(with option for heating)

Modern modular design of RCME AH1 brings maximum space installation flexibility, cost effective expansion and redundancy whilst allowing investment to be spread to match project phases.

## High Efficiency Cooling Only Air Cooled Chiller:

- Site Customisation based on Price, Efficiency or Space
- Combine up to 8 modules for 100 to 1,400 kw installations
- Intelligent Controls - Dynamic Backup, Current Limiter
- Low Noise Options - No Capacity, Efficiency or footprint reduction
- 116 total combinations

## High Efficiency Heat Pump Air Cooled Chiller:

- Match differing installation cooling and heating loads by combining C/O & H/P modules in the same "Chiller" \*
- Combine up to 8 modules for 95 to 1,280 kw installations
- Intelligent Controls - Smart Defrost, Load Up/Down "Learning" Control
- Two Operating Modes - High Efficiency, Precise Water Outlet Temperature
- 116 total combinations

## RCME 40~70, air-cooled, basic modules

## Screw Chillers

# RCME WH

(with option for heating)

Modern modular design of RCME WH provides continuous operation, capacity control and safety.

## High Efficiency Water Cooled Chiller:

- Only 806 mm width for easy site access on refurbishment projects
- Combine up to 8 modules for 140 to 1,920 kw installations (170 to 2,384 kw heating capacity)
- Intelligent Controls - 2nd Water Temperature settings (Redundancy with Dynamic Backup with option for heating)
- Reduced refrigerant per circuit in large capacity installations
- Option for heating includes Site Customization based on – Price, Efficiency, Space
- 116 total combinations
